How to install Jamf Protect on a device that's not handled by a MDM-solution

If not already there go to https://download.su.se/dsa/Jamf%20Protect%20macOS/

Important - Jamf Protect General Requirements > Target computers with macOS 10.13 or later.
1. The **Agent Installer** is same for all unmanaged clients. To download go to the catalog named "*Jamf Protect general agent install for all macOS clients*".

Index of /dsa/Jamf Protect macOS

Name	Last modified	Size	Description
Parent Directory		-	
Information about Jamf Protect/	2021-03-22 16:26	-	
Instruction for installing Jamf Protect on unmanged Clients running macOS/	2021-03-22 18:20	-	
Jamf Protect general agent install for all macOS clients/	2021-03-19 15:41	-	
Jamf Protect specific institutional configuration installation/	2021-03-22 12:29	-	

Apache/2.4.7 (Ubuntu) Server at download.su.se Port 443

Download the **Jamf Protect Agent Installer** at this point named "*JamfProtect-1.3.2+268.pkg*", that resides within "JamfProtect-1.3.2+268.dmg"

Name	Last modified	Size	Description
Parent Directory		-	
JamfProtect-1.3.2+268.dmg	2021-03-23 07:42	21M	

Apache/2.4.7 (Ubuntu) Server at download.su.se Port 443

2. Then go to the catalog named "*Jamf Protect specific institutional configuration installation*" and find the number representing your department, click to open the catalog that represents your department, download the mobileconfig-file
If you are uncertain of the number that corresponds with your department you will find the information on this page:
https://www.su.se/medarbetare/ekonomi/institutionslista

Apache/2.4.7 (Ubuntu) Server at download.su.se Port 443

In the manual click to open the catalog representing "*example*" department 501.

501/	2021-03-22 12:45	-

In the manual, download the "*JamfProtect-Plan-501 department JP on unmanaged clients.mobileconfig*".

When you have downloaded the Jamf Protect Agent Installer and a mobileconfig representing your department click on the mobileconfig that you downloaded if you haven't already been asked to do so.

JamfProtect-
Plan-50…ileconfig

3. Next click the "*JamfProtect-1.3.2+268.pkg*" to install the Agent. After you have installed the agent follow these very important steps:

- Open System Preferences > Security & Privacy > Privacy > Full Disk Access and add the Jamf Protect agent. If you don't see the Jamf Protect you need to navigate to /Library/Application Support/JamfProtect/
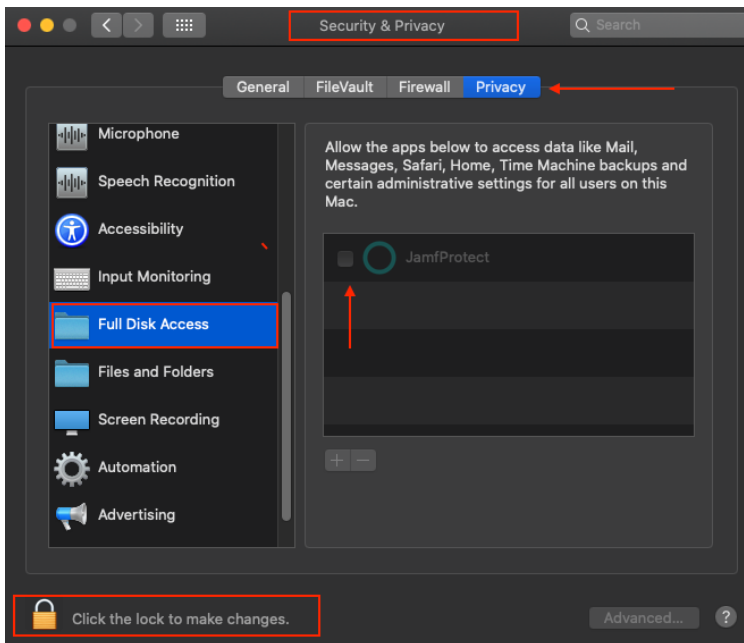

- In the same area of System Preferences do the same thing with Accessibility instead of Full Disk Access.
- Open Terminal.app and run this command to restart the agent with the new disk permissions: sudo launchctl kickstart -k system/com.jamf.protect.daemon
